○ **Projects carried out in Engineering:**
Design And Development:

Groundnut Sheller may be a simple machine or device made of metal or a combination of materials which is designed to separate the kernels from a shell of the peanut. These machines were developed to scale back the amount of manual labour. Groundnut shellers are available in handheld, portable, motorized and enormous commercial sized units. Shelling is that the removal of the groundnut

○ **Extra-Curricular Activity:**
Automated Guided vehicle :

Designed and developed Automated Guided vehicle (AGV named as PRADHAYA) for use in ·in COVID-19 Wards at KIMS hospital Hubli. This prototype model is researched and built for the delivery of food and medicine supply to the Covid patients where the contact between the covid staff and patients can be minimized. This model is designed to take payload of 10kg and line follower technique is used to guide the vehicle, this model can operate both automatic and manually.

Hands-free Sanitizer Machine:

Designed and developed Hands-free Sanitizer Machine during pandemic COVID-19 lockdown period and installed in KIMS Hubli which is inaugurated by Minister of Large and Medium Scale Industries (2020) Jagadeesh Shettar.
